

IC-2500 (IC-2400) 9600 Bps!

Yes it's possible to run 9k6 with an Icom IC-2500 (70cm/23cm TRX).  
I BELIEVE the 2m/70cm version (IC-2400) is similar to modify (Hopefully!)

Here's my little description:

RX : Pin 1 (=MDET) on the DET SW-Unit (mainboard A)  
Note:  
You receive on this Pin signals of that band, witch ist selected  
in the main display

TX : You can take the Signal from R73, R72 or C137  
Note: as written above

Comment: These TRX is accorded to my experiences relatively good  
qualified for 9600 Baud Packet-Radio Signals.
