APRS & DIGITAL

A long-awaited new operating style that follows your senses.

APRS

Compatible with the APRS communication protocol, which allows real-time two-way data transmission by using packet communications, this stand-alone device provides enjoyment of communications that make use of a variety of features, including sharing of local and GPS positional information and message exchange.

Other station positional information, weather station information

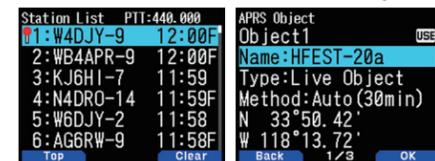

The new feature "relative display compass" enables real-time GPS information for your station 'at a glance,' information for your own station set in advance, or the distance/direction/heading/speed of other stations. It is now easier to confirm the relationship with your own station's position and heading. Weather station information can be displayed in color, such as rainfall, temperature, wind speed/direction, barometric pressure and humidity data.

Own station/other station relative display compass Weather station information

Station list and object compatibility

A maximum of 100 stations can be stored, including mobile

Station list Object settings

Improved voice quality and various enhanced features for increased amateur radio enjoyment.

Wideband and multi-mode

Wideband reception is possible on Band B. In addition to DV/DV Fast Data/FM/NFM/WFM/AM on the 0.1~524MHz bands, SSB/CW reception is also possible. The unit comes with a fine mode that achieves zeroing-in with a minimum step frequency of 20Hz*1, and is equipped with a bar antenna*2 for 0.1~10MHz reception. It also has VxV, UxU, and VxU simultaneous receive functionality.

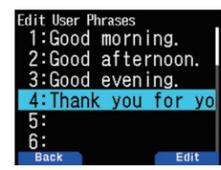

HF band SSB reception (PTT icon displays operating band) IF receiving filter settings
*1: Only for SSB, CW and AM modes *2: Selectable with SMA antenna connector

stations, base stations, weather stations and objects. It is also possible to limit or sort the kinds of stations received. Local information can also be transmitted as an "object."

Messaging functionality

Real-time messaging is possible between stations running APRS. Messages can be sent by inputting text via the keys on the panel or selecting a message template.

Customizable message templates

QSY Functionality

FM or D-STAR voice channels can be set according to frequencies or D-STAR repeaters information embedded in beacons from APRS stations enabling fast QSY. D-STAR gateway communication is also set automatically.

KISS mode TNC

The built-in KISS mode TNC for APRS enables APRS operation via PC after connection via USB or Bluetooth.

APRS menu settings

The unit is also compatible with a variety of features that expand its scope of operation, including SmartBeaconing, Decay Algorithm, Proportional Pathing and APRS voice.

Built-in IF receiving filter is for comfortable reception

The IF reduces neighboring interference signals during SSB or CW reception, and enables low-interference reception with its excellent skirting capacity. (Selectable range: SSB: 2.2~3.0 kHz, CW: 0.3~2.0 kHz, AM: 3.0~7.5 kHz)

IF output mode

Capable of output to a USB port of an IF signal with a central frequency of 12kHz and a bandwidth of 15kHz, enabling smart reception of all kinds of data via a PC.

High-performance DSP voice processing

The unit comes equipped with an audio equalizer that enables the setting of each of a 5-band reception EQ (0.4~6.4kHz) and 4-band transmission EQ (0.4~3.2kHz), making it possible to adjust sound quality to your preference.

DIGITAL

Compatible with D-STAR, the amateur radio communications network that has both voice and data modes. Both local and international communications are possible through diverse operations including simplex communications, single repeater relay communications and inter-repeater gateway communications.

Compatible with D-STAR, as developed by JARL

The unit is compatible with the D-STAR amateur radio digital communication system developed by the Japan Amateur Radio League (JARL). Enjoy a variety of communication methods with the clear voice only digital can deliver.

DV mode (single band) APRS+DR mode (dual band)

DV fast data mode

The unit features a DV fast data mode that accelerates communication throughput by sending data on unused voice frames to achieve more comfortable data transmission.

Simple operation in DR (D-STAR Repeater) mode

The calling of other stations is made simpler by setting access repeaters and other stations after selecting them from a list. The unit includes a direct reply function that enables a reply after pressing PTT for calling in gateway communications, as well as a function that enables icon-display confirmation of accessibility during kerchunk or gateway communications. A maximum of 120 communication history items can be

stored, with other stations able to be easily reset from the communication history.

Setting via the digital function menu

The appeal of D-STAR is being able to enjoy a variety of operating styles. The unit employs a separate menu that enables one-touch operation switching.

Digital function menu

Easily updated repeater list

The latest repeater lists can be downloaded from the internet. Updates to the latest information can also be performed via a PC, using a USB cable, via Bluetooth or a micro SD card.

Repeater list

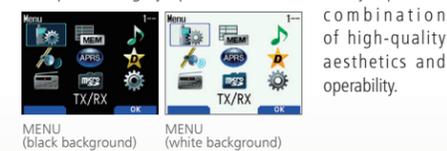

Inherit the reputable KENWOOD sound

Enjoy clear-voice and easily heard communications through KENWOOD custom tuned sound quality based on know-how accumulated over many years and the latest in audio engineering.

The perfect combination of visibility, durability and user-friendliness.

Visibility and user-friendliness taken into account

The unit uses TFT transfective color liquid crystals, and using reflected light and a backlight, achieves superior visibility in both dark places and bright places such as in sunlight. In addition to the cross-shaped key structure, the keypad incorporates highly-operable flat and slim key-tops for a combination of high-quality aesthetics and operability.

MENU (black background) MENU (white background)

Example of dual band display

Easily understandable pop-up screens

For easy visual comprehension of pop-up screens, APRS uses blue as a background color, while D-STAR uses green.

APRS pop-up D-STAR pop-up

Built-in GPS

The unit is equipped with a high-performance GPS patch antenna. It also features closest D-STAR repeater search, along with a GPS receiver function that stores movement paths, and an automatic time correction function.

Standard compatibility on a rich interface

The unit features standard compatibility for Bluetooth. Micro SD / SDHC memory card and micro-USB ports are also included, enabling operation via an interface flexibly linked with a PC.

Greater convenience through free PC software

Available software includes the MCP-D74*3 program, which enables the management of settings including memory on a PC, and the ARFC-D74*3 program, which enables free changing of the unit's frequency via PC.

*3: The MCP-D74 and ARFC-D74 programs are available post-sale for download from the Kenwood website.

Other TH-D74A features

- 1,000 memory channels ●1,500 repeater lists
- 4-stage transmission output switching (5/2/0.5/0.05W)
- Voice recording functionality (microSD/SDHC) ●Voice messaging (4ch) ●WEATHER ALERT/RX ●Voice guidance
- GPS receiver mode ●Communication log (microSD/SDHC) ●Scan (Band, MHz, Program, Memory, Memory Group, Call, Priority, D-STAR Repeater)
- Memory channel lockout ●50 CTCSS frequencies / 104 DCS codes ●Cross-tone ●Meter-type switching
- Frequency direct input ●DTMF memory (10ch) ●Dedicated EchoLink DTMF memory (10ch) ●DTMF remote control ●FM radio mode ●Customizable power-on message and bitmap image ●Waypoint output
- Date/time display ●Frequency step switching ●Shift ●VOX ●Auto repeater shift ●Monitor ●Auto power-off ●Battery save ●Key lock ●APRS lock ●Memory shift ●Key beep on/off ●Programmable function key ●Display language change ●Mic sensitivity switching ●3-stage LCD Brightness ●Reset (VFO, PART, FULL)
